

Viper

Specifications

Crop
Capsicum

Market Segment
High-tech Blocky Red

Disease Resistance
High Resistance: Tm:0-2

Hybrid
Yes

Features

- Strong plant with generative open habit
- Fast to mature with quick colour change
- Tapered blocky shape
- 210gm average fruit weight
- High overall yield
- Strong against cracking and Blossom End Rot
- Powerful first flush with strong setting up plant

Specifications

Description:

VIPER is a blocky green to red capsicum suitable for soil-less heated production sites. Extremely high production with a high percentage of quality fruit. Excellent results have been seen throughout the world. VIPER produces a large blocky fruit (90-100mm diam) which changes quickly from green to red. The plant is generative with an open plant habit and lots of power. VIPER sets its first flush powerfully and keeps setting strongly up the plant.

For a full definition of the disease terms, High Resistance and Intermediate Resistance refer to the product section on our website.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location.
