

Allstar

SOUTH PACIFIC SEEDS
SINCE 1986

Specifications

Crop

Rockmelon

Market Segment

Non Sutured ESL

Hybrid

Yes

Disease Resistance

High Resistance: Fom:0-2, Px:1,2

Features

- ESL melon with easy to judge maturity
- Excellent flavour and quality
- Round oval shape with medium fruit size
- Good tolerance to ground cracking
- Strong disease package

Description:

ALLSTAR is a Harper style rockmelon bred for flavour, fruit quality and extended shelf life with a strong disease package of Powdery Mildew (Px) and Fusarium Wilt (Fom). The fruit have a rounded oval shape, dry cavity and excellent firmness and uniformity of size. The melons have a blue green background colour with a well-covered net and dark orange internal flesh. The fruit of ALLSTAR are medium in size, mostly in the 9-12 range, depending on region and production season. Sugars can reach levels of 12-14°Bx at correct maturity under favourable conditions. Maturity is easy to judge as netting becomes more prominent on the peduncle (fruit/stem attachment) as the melon reaches maturity. ALLSTAR has shown very good tolerance to ground cracking in plantings to date.

For a full definition of the disease terms, High Resistance and Intermediate Resistance refer to the product section on our website.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location.
