

Amati

Crop

Tomato

Market Segment

Large Coloured

Hybrid

Yes

Disease Resistance

High Resistance: Va, TYLCV, For

Intermediate Resistance: Fol:1-2, ToMV (Tm2a)

Features

- Brown-red loose pick variety
- Good size and set
- Good uniformity and firmness

Description

AMATI is a large, brown coloured, round variety with red undertones and a dark green shoulder for loose pick harvest. The indeterminate plant and fruit are of a good set and size and AMATI produces uniform and firm fruit on a fishbone truss. AMATI's average fruit weight is approx.150g and has high resistance to Fusarium Crown and Root Rot (For), Tomato Yellow Leaf Curl (TYLCV) and Verticillium Wilt (Va).

For a full definition of the disease terms, High Resistance and Intermediate Resistance refer to the product section on our website.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location.
