

Carmine

Crop

Spinach

Market Segment

Babyleaf

Hybrid

Yes

Disease Resistance

High Resistance: Pe:1-14

Features

- Red-stemmed spinach
- Red veins
- Narrow pointed leaf
- Dark green, flat leaf
- Upright growth habit

Description

CARMINE is a red-stemmed spinach with dark green, narrow pointed leaves and red veins, for babyleaf production. It adds a hint of colour to salad bags as alternative to chard or beet leaf, with a smooth texture and flat leaf habit. The red veins and stems are even more vibrant in cooler seasons. CARMINE has an upright plant habit with medium leaf strength and has shown good uniformity in plantings to date. CARMINE has resistance to Downy Mildew (Pe).

For a full definition of the disease terms, High Resistance and Intermediate Resistance refer to the product section on our website.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location.
