

Danika

Crop

Tomato

Market Segment

Field Indeterminate Round

Hybrid

Yes

Disease Resistance

Intermediate Resistance: Vd, Fol:1-3(US), ToMV

Features

- Classy field indeterminate
- Strong plant with high yield potential
- Good firmness at red
- Striking presentation in box

Description

DANIKA is a indeterminate variety in the 160-170 grams range with intermediate resistance to Fusarium Race 3 and ToMV. DANIKA has long shelf life qualities with a strong vigorous bush and high yield potential. The globe to deep oblate shaped fruit have a very tidy calyx scar, uniform green shoulder and good firmness when red. DANIKA has been widely received by the marketplace due to its striking appearance and presentation in the box. An outstanding variety for both growers and markets alike.

Cultural Notes: A naturally vigorous plant, Danika requires less fertilizer to restrict growth and maximise yields unlike some varieties which need to be pushed to yield.

For a full definition of the disease terms, High Resistance and Intermediate Resistance refer to the product section on our website.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location.
