

Greystone

Crop

Pumpkin

Crop type

Grey

Hybrid

Yes

Features

- Large-fruited pumpkin with minimal ribbing
- High yielding, approx. 6.5kg range
- Dark orange flesh and smooth grey skin
- Small seed cavity.

Description

GREYSTONE is a large-fruited, grey-skinned pumpkin in the Sampson/King Grey class. It has been shown to provide the grower with high yields of fruit in the 6.5kg range with a smooth grey skin colour with minimal ribbing. Flesh colour is a good dark orange with a small seed cavity.

This variety has the advantage of very little pink skin discolouration under periods of storage. GREYSTONE is a variety that sets fruit close to the crown and along the runners and can be planted at a little higher density than fully vining grey varieties, further increasing the yield potential.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location.
