

Kameron

Crop

Cabbage

Market Segment

Drumhead

Hybrid

Yes

Disease Resistance

Intermediate Resistance: Xcc, Foc

Features

- Main season production
- Larger size with a good frame
- Excellent holding in the field
- Globe-shaped head

Description

KAMERON is a proven performer throughout Australia, offering a highly uniform product with a good large frame and excellent holding for main season production. It produces a large, globe-shaped head at maturity and has low levels of off-types, which helps to ensure maximum field cut. KAMERON is approx. 100-120 days to maturity from transplant and has resistance to Black Rot (Xcc) and Fusarium Yellows (Foc).

For a full definition of the disease terms, High Resistance and Intermediate Resistance refer to the product section on our website.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location.
