

Kens Special Hybrid 864

Crop

Pumpkin

Market Segment

Kent

Hybrid

Yes

Features

- Earliest maturing Kent variety
- Vigorous vine
- High yield potential
- Concentrated harvest
- Excellent eating qualities

Description

Kent or Jap pumpkins are the best eating pumpkin on the market and demand for this type is always high on the market floor. KENS SPECIAL HYBRID 864 is an earlier maturing, higher yielding version of the original open pollinated strain. The vine has the ability to set much earlier, maturing 2-3 weeks ahead with a more concentrated harvest and has the potential to significantly out-yield the original strain.

Cultural Notes: The vine is extremely vigorous - control plant size by reducing early nutrition. Suggested spacing 1.5-2m between plants, 2-3m between rows. Side dress with CaNO₃, or KNO₃, after flower set to aid fruit retention. For maximum yield ensure one bee hive per acre.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location. As a consequence South Pacific Seeds cannot accept any liability as to the accuracy of this information. SEPTEMBER 2020. ACN 002 887 256
