

Longhorn

Crop
Spinach

Market Segment
Babyleaf

Hybrid
Yes

Disease Resistance
High Resistance: Pe: 1-16,19
Intermediate Resistance: Pe: 17,18

Features

- Vigorous and uniform
- Lightly savoyed and cupped leaf
- High yielding for shoulder season production

Description

LONGHORN is a vigorous, mid-dark green, high yielding spinach with a semi-erect, dense habit. LONGHORN suits production in spring and autumn and produces uniform, thick, lightly savoyed and cupped leaves, with a slightly pointed oval shape. LONGHORN has resistance to Downy Mildew (Pe).

For a full definition of the disease terms, High Resistance and Intermediate Resistance refer to the product section on our website.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location. As a consequence South Pacific Seeds cannot accept any liability as to the accuracy of this information. SEPTEMBER 2020. ACN 002 887 256
