

Morpheus

Crop

Spinach

Market Segment

Babyleaf

Hybrid

Yes

Disease Resistance

High Resistance: Pe: 1-13,15,16

Features

- Dark green spinach for cool shoulder harvest
- Extremely high yielding with thick, savoyed leaf
- Oval-shaped leaf with a slight point
- Tolerance to tip splitting in windy conditions

Description

MORPHEUS is a dark green, mid-vigour spinach suited to babyleaf production for the cool shoulder harvest season. MORPHEUS is extremely high yielding and produces high numbers of thick, savoyed leaves which process well, making it an ideal variety for producers of salad packs. Leaves are oval in shape with a very slight point resulting in a tolerance to tip-splitting in windy conditions. MORPHEUS has a very wide window and, in more northern regions, may even be suitable for early winter harvest. As with many savoyed types, MORPHEUS will become even more curled as the conditions cool, thus increasing the yield. MORPHEUS has resistance to Downy Mildew (Pe).

For a full definition of the disease terms, High Resistance and Intermediate Resistance refer to the product section on our website.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location.
