

Ninja

Crop

Tomato

Market Segment

Field Indeterminate Round

Hybrid

Yes

Disease Resistance

Intermediate Resistance: Vd, Fol:1-3(US), ToMV, TYLCV

Features

- Strong vigorous plant
- Globe shape; 170-180g
- Firm at red
- Good disease package

Description

NINJA is an indeterminate LSL variety which to date has shown good results in wet weather with a good disease package, including intermediate resistance to Vd, Fol:1-3, ToMV and TYLCV. The plant has a strong but not overly vigorous habit with good yield potential and has worked well in autumn sowings to date. The fruit are globe shaped with large size averaging 170-180g and has good firmness at red. NINJA has the ability to maintain size throughout the plant with reduced pruning, thereby offering some labour savings.

For a full definition of the disease terms, High Resistance and Intermediate Resistance refer to the product section on our website.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location.
