

Poniente

Crop

Cucumber

Market Segment

Greenhouse Continental

Hybrid

Yes

Disease Resistance

High Resistance: Ccu

Intermediate Resistance: CMV, CVYV, CYSDV, Px

Features

- Early maturing with high yield potential
- Progressive easy setting
- Low rate of fruit abortion
- Dark straight fruit with good shape and length
- Open well-balanced plant
- Extensive disease package

Description

PONIENTE is a high yielding European type providing excellent quality fruit with an extensive disease package which includes Gummosis, Powdery Mildew, and Cucumber Mosaic Virus. The open but well-balanced plant has good vigour and power with progressive easy setting, and a low rate of flower abortion under warm conditions. The fruit are dark and straight with a nice tidy neck and moderately ribbed appearance, and average approx. 30-33cm length. PONIENTE is suggested for sowing in spring through to late summer, harvesting in late spring, summer and autumn in most areas. Contact your SPS Rep for the sowing recommendations for PONIENTE in your local region.

For a full definition of the disease terms, High Resistance and Intermediate Resistance refer to the product section on our website.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location.
