

Sarina

Crop

Tomato

Market Segment

Grape

Hybrid

Yes

Disease Resistance

High Resistance: Fol:1,2(US), ToMV:0-2, Pf:1-5

Intermediate Resistance: S

Features

- Indeterminate speciality grape
- Medium to large size
- Outstanding quality and high yield potential
- Excellent flavour and shelf life
- Proven performance in many areas

Description

An indeterminate grape tomato with medium to large size SARINA produces firm glossy jointed fruit of approx 12-16g in open field production. Offering excellent flavour, shelf life and a high yield potential, SARINA is a proven variety for speciality grape growers with good uniformity, quality and colour. Ideal for regions and timeslots when a larger fruit size is required.

Cultural Notes: Butt fruit can get too large during cool periods in some areas as maturity times lengthen - smaller options like Merlot may be considered for use under these conditions. SARINA is more suited to outdoor use or covered production in soil, as it may get too large under hi-tech production. Merlot is suggested as a smaller fruit option under these conditions.

For a full definition of the disease terms, High Resistance and Intermediate Resistance refer to the product section on our website.

The information provided is based on an average of data and observations collected from our trials. Significant variations may occur in the performance due to a range of conditions including cultural/management practices, climate, soil type and geographic location. As a consequence South Pacific Seeds cannot accept any liability as to the accuracy of this information. SEPTEMBER 2020. ACN 002 887 256
